

## Code and Data Sets

The ReLU network with JAX verification scripts are `NNverificationExact.py` and `NNverificationSincMultiLayer.py` for Example 1 and 2, respectively. We post-processed most of the data by exporting it to MATLAB and running our plotting scripts in MATLAB on the output of the above two scripts. Due to the 100 MB restriction, we are not able to compress all the data-sets for initial submission upload; however, they are all uploaded to our GitHub repository, and may be exported from the python scripts into MATLAB for post-processing.
